

LOWER LOLO CREEK IS DRY

Dry Lolo Creek about 1/4 mile below the railroad bridge. 9/20/2012

HOW CAN YOU HELP?

We thank the major irrigation users on Lolo Creek who are helping by cutting back on the amount of water they are drawing. But the rest of us need to help too. Please moderate your pasture, yard, and garden watering as much as possible. Water use from wells, and tributaries, as well as Lolo Creek water right use, affect the amount of water that will flow in the creek. Together, we can help the fish and wildlife that rely on our creek flowing to the river.

---- Thank you, from the Lolo Watershed Group ----
